Good Afternoon CY,

Thanks for your message. I hope this message finds both you & Maryam doing well!

Thank you for the editorial modification CY. I believe the revised statement meets our needs & avoids potential confusion regarding the single property with a PCB UCL of 1.8 ppm (based upon a sampling efforts & characterization of their backyard soils).

Sara actually noticed the potential for this minor inconsistency in the update materials & I think the clarity you provide below will serve the community well.

Best Regards

Hi Patrick,

Long time no talk...hope you are doing well. Regarding the highlighted statement below, how about changing the sentences to:

... DTSC and US EPA determined the levels of PCBs **are below** the health protective levels for the City properties and the residential properties that participated in the sampling except for one property, which is recommended for soil removal

based on additional sampling at the property backyard. DTSC is working with the City of Riverside to initiate removal of the soil containing PCBs in the property backyard.

Please let me know if this would work.

CY

CY – Patrick had a question about the highlighted text. Could you give me a call to discuss when you have a moment?

Neighborhood Evaluation

To address community concerns about possible impact from historical activities in the Ag Park on the neighborhood, DTSC sampled 27 properties adjacent to the Ag Park, including two properties owned by the City of Riverside (Rutland Park and a right-of-way bordering Ag Park on the west). DTSC and US EPA determined the levels of PCBs **are below a** level of health concern for both the City properties, and the residential properties that participated in the sampling. However, as a precautionary measure, DTSC is working with the City of Riverside to conduct a cleanup in the backyard of one of the homes where PCB concentrations were slightly higher than the cleanup goal for the Ag Park.
